

**ABOUT  
SEAHORSE AUSTRALIA**

*Seahorse Australia is a specialist aquaculture farm producing seahorses for the aquarium market since 1999.*

*Situated on the Tamar River, northern Tasmania, the farm is fed by the pristine waters of Bass Strait.*

*Seahorse Australia's fish have been exported to many countries including Japan, South Korea, Taiwan, USA, Canada and various European countries. We pride ourselves on our customer service and satisfaction.*

*Managed by Rachelle and Craig Hawkins, we are continuing to research and expand our range of unique fish products.*

## Temperate Seahorses

16-20°C

Southern Knights - Australia's best known seahorse

### SOUTHERN KNIGHTS

(*Hippocampus abdominalis*)

Australia's most popular aquarium seahorse since 1999. They have plenty of character and are one of the most active seahorses available. The 2nd largest species in the world, Southern Knight's graceful manner delights all who see them and

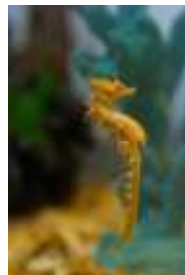

are an excellent choice for temperate marine aquariums. Recommended minimum size tank for home aquarists is 80L per pair.

### SOUTHERN CHAMPIONS

(*Hippocampus breviceps*)

Adorned with nodules and sometimes wild hair styles, these tiny fellows (~5cm) are a unique looking creature suitable for smaller aquariums (min 50L).

Like Southern Knights they are active and playful, particularly during feeding time.

Southern Champion - Tiny, adorable and unique.

## Tropical Seahorses

24-28°C

### ASIAN EMPERORS

(*Hippocampus kuda/taeniopterus*)

Historically one of the most popular aquarium seahorses prior to the CITES restrictions on importation of wild caught specimens.

A native to South east Asia, this large and hardy species is an excellent choice for new hobbyists. Colours vary from black with intricate white striations to orange or yellow with red spots and individuals may change colour overnight.

Golden Asian Emperor

### CHARGERS

(*Hippocampus barbouri*)

Chargers are armed with a body of spines and have a distinct striped nose. They are popular with hobbyists wanting to raise young. Adults exude a sense of

calm as they rest unperturbed with their tails wrapped around their holds or glide serenely through the water. Typically cream, orange or yellow.

## General Information

*Detailed care sheets are available on request*

Captive-bred seahorses are relatively hardy marine fish. Like any fish, water quality and temperature are key factors in their success. They have been trained to eat frozen Mysis shrimp available at most pet stores. We recommend each variety is held separately.

For inexperienced aquarists, seahorses are best kept on their own. Many experienced hobbyists keep them with a range of other creatures but research in advance is recommended.

Air freight is possible to most major centres in Australia. International customers please contact us for availability to your area.
